## **OUTAGE MANAGER**

### ***Are you ready to Power Up your Career?***

*Thomassen Energy (TEN) is the leading provider of aftermarket service and solutions to the gas turbine-focused energy industry. Thomassen Energy is part of the South Korean Hanwha group of companies, and has a strategic focus on zero carbon emissions solutions.*

*Working at Thomassen Energy means working in a positive working atmosphere with good working conditions. We offer a sustainable career with an eye for your personal development, and in which growth is possible within the various disciplines of the organization. We coordinate the needs of the organization and the wishes of the employee as much as possible. Internal and external training can be part of this and every employee has an annual training budget for this.*

*Thomassen Energy has a collegian working atmosphere where colleagues help and challenge each other. Together we work on the organizational goals and where necessary, we are flexible in our efforts to satisfy our customer.*

*Thomassen Energy is ready for the future and playing a significant role within the energy transition, partnering up with business partners fully dedicated to deliver High Hydrogen Gas Turbine Retrofits within the very near future.*

### ***Would you like to be part of this transition?***

### **What will you do**

You will be responsible for preparation, planning, leading, execution and close out of planned/unplanned outage events. As the single point of contact to the customers at their plant sites for all aspects of outage service work you have an important contribution to the success of the project and customer satisfaction. Next to the execution you are also in charge of the definition of the scope of

work, tooling & resource requirements, scheduling, briefing, supporting and the contact point of field engineers on assigned project in the back office.

You will ensure project planning in terms of scope, resources, tooling and scheduling meet customer and project requirements and project execution at site with the highest quality and safety standards possible ensuring that the deliverable's regarding, budget & planning are reached by the coordination of internal and external resources, process development and site execution.

### **You are responsible for**

- Leading/Driving outage/project planning phase of the project in the back office and ensure scope of work based on best practices and lessons learned and extra works is defined, scheduling, resource, mobilization plan and tooling requirements and documentation are prepared in a timely and quality manner
- Responsible for the briefing and leading Field service engineers and managing outages from back-office when required
- Execution of preventive (planned or unplanned) and corrective maintenance as well as installation & commissioning activities in a safe and quality manner.
- Manage close out activities of the project in terms of demobilization of crew, reporting, lesson learned and so on.
- Ensure continuous improvement of the company by proper reporting of any non-conformity like deviation and/ or customer complaint to the Project Manager
- Providing leadership for TEN and customer site specific quality / HSE policies and objectives

### **Your will bring to the table**

- You thrive in a dynamic and versatile environment;
- You get energy from being involved in both work preparation as well as execution activities;

- You are efficient and pragmatic. You can select the best solution for problems at hand;
- You are flexible and able to adapt when it is needed to mobilize for planned and unplanned mobilization as well as office work
- You like to travel
- You are an organizational talent and team player; an improver and brings immediate focus;
- You are an excellent communicator and knows how to motivate people;
- You are an all-round engineer having solid experience in the field of power generation industry or equivalent.

**We offer**

An attractive position in a growing and ambitious company making the change in the world to clean energy. We offer attractive labor terms like hybrid working, profit sharing, attractive pension within the Metalektro Collective Bargain Agreement, training and development opportunities and a highly dynamic and international working environment.
